

**LIJ Medical Center @ Imaging Center
Long Island, NY**

**CATHRYN BANG + PARTNERS New York
Healthcare Architecture, Planning, Interiors**

The Imaging Center for LIJ @ iPark is designed with two different circulation zones, a patient circulation and a staff circulation, that both access the 'Procedure Module'. This module, which can be repeated as the clinic expands, consists of several procedure rooms that are serviced by a common 'Work Core'. Here, staff will keep supplies and have access to Control room, equipments and other required support spaces, all in close proximity of the procedure rooms, while maintaining separation from patient traffic and patient interaction.
